

Full Stack Assessment

Context

The attached `funds.csv` is your data. You create your own repo.

Part 1: Stand up the app

Build a minimal app over the CSV: Postgres, a Python API, a React frontend. What is displayed on the frontend is up to you, but the second part is the more important part.

The `commitment` column arrives as text, values like `$1,200,000 USD`. Load it as text.

Commit this as your starting point.

Part 2: Migrate the column

Move `commitment` to:

```
1 | commitment_cents | bigint
2 | currency          | char(3)
3 |
```

We deploy on a rolling basis. Instances come up on the new version while others are still serving the old one, and the two overlap for several minutes. We don't take the app down for schema changes.

The rule: for each step you ship, the previous step's code must serve correct traffic against the current step's schema.

How we replay it

Because each branch is cut from the last, we can check out any two consecutive steps side by side, point them at the same database, and see whether the older one still works.

Your repo needs to support exactly these:

- `make seed` — drop and recreate the database, load the CSV
- `make migrate` — apply every migration up to the current checkout
- `make serve PORT=xxxx` — run the API on that port

What to submit

A link to your repo, with one branch per step, each branched off the previous one, and a PR opened for each. Leave them open. Add `ahoward2`, `azakmay`, and `kingmmk` as collaborators so we can see the PRs.

Each PR description needs:

- What this step does and why it's safe to deploy on its own
- What must already be deployed before it goes out
- Anything else you think important

Three or four sentences per PR is plenty. We will read these.

Guidelines

- **Time:** ~2 hours total
- **AI:** Use it. We do. We're not testing whether you can write a migration by hand.
- Don't squash your commits.
- Let us know what you decide is out of scope.

What we care about

How you sequence the work

Next steps

An hour with us afterward. You'll walk through your sequence and we'll extend it together.

Reach out if anything is unclear.
